About Algolia

Over 17,000 top global brands use Algolia's AI-powered search, discovery and recommendation platform to increase conversions and online revenue. As an API first solution, Algolia can easily integrate with any existing technology stack. Algolia is the only end to end AI search solution on the market enabling both keyword and vector search from a single API.

About this document

We've analyzed your ecommerce experience, site traffic and other available data to build this report. We have identified areas of improvement that can have a significant impact on your conversions and revenue.

Why fast, intuitive, and immersive discovery experiences matter

43% of site visitors go immediately to the search box
FORRESTER

Shoppers using search spend 2.6x more than non-searchers
salesforce

Visitors using search convert 2x higher than non-searchers
Econsultancy

Personalized search increases conversion rates by up to 400%
McKinsey & Company

Algolia delivers

+35%

Higher conversion rate when using search

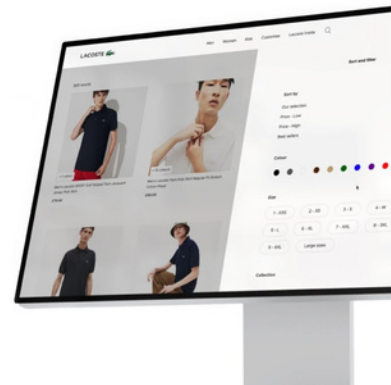

+50%

Higher conversion rate with omni-channel, personalized search

+37%

Higher conversion rate, 150% increase in sales from search and 88% decrease in bounce rate

Leading retailers increase conversions and revenue with Algolia:

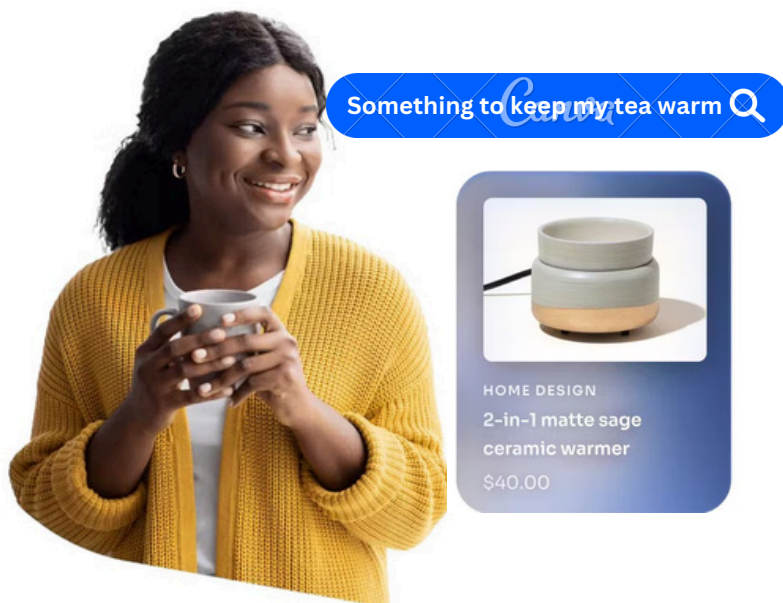

Algolia NeuralSearch

Algolia NeuralSearch is the world's most advanced search solution. NeuralSearch combines Algolia's award-winning full-text keyword search engine with vector understanding into a single API.

Your customers can type in just about anything to get great results thanks to natural language processing with universal language support.

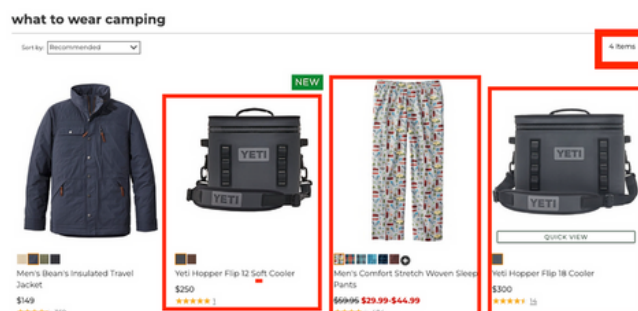

Algolia NeuralSearch is the only end-to-end AI solution that spans query understanding, retrieval, and ranking.

Your customers can expect optimized results fueled by your data. Better results drive higher click-throughs and conversions. Reclaim your time: no more guesswork, no time wasted in setting up language rules or synonyms.

Regular Keyword Search

What to wear camping

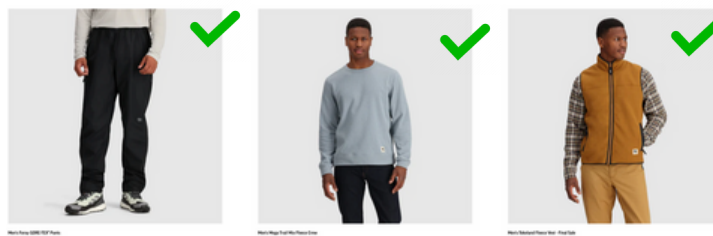

Keyword search can't handle these long form or descriptive queries easily without manual intervention by your team, leading to a worse customer experience and only a few relevant results.

Out of the box, NeuralSearch delivers relevant results in milliseconds even for long form queries because it understands user intent.

NeuralSearch Results

Algolia NeuralSearch is the world's most advanced search solution and is delivering tremendous value in a short time. By providing best in class keyword search with best in class vector search from a single API, Algolia customer, Frasers Group was able to unlock:

**F R A S E R S
G R O U P**

+17%

Further conversion rate increase on top of Algolia's best in class keyword search and a 65% reduction in no results rate

E V E R L A N E

+9%

Further conversion rate increase on top of Algolia's best in class keyword search and a 9% increase in clickthrough rate

"We tested Algolia NeuralSearch with two of our brands (Missguided and Isawitfirst), and were thrilled to see above ~65 percent drop in zero search results and up to 17 percent uplift in conversion rates.

These results, despite only sending a portion of our query traffic to Algolia NeuralSearch over a four-week period, exceeded our expectations.

Notably, our existing search implementation seamlessly evolved to further improve our customers' discovery journey and improve their experience on our website—all without having to make any changes to a single line of code. We are excited to see what the future holds with Algolia NeuralSearch."

Kyle Sanders, Head of Digital Optimisation, Frasers Group

Areas Of Improvement

Natural Language Understanding

For the query, "best jacket for the winter" your top result is a vest with lightweight jackets after. Your search today does not understand the intent and is not delivering the most relevant results. This causes higher bounce rates, lower AOV and conversions.

best jacket for the winter

★★★

Typo Tolerance

misspellings or typos should work out of box. Adding a space to "windbreaker," should result in relevant results out of box. On L.L. Bean, only 14 products surface with 9 of them not being relevant. While this is one example, the reality is there are hundreds if not thousands on your site today that costs revenue

Query Suggestions & Type Ahead

Having a search-as-you-type experience, type-ahead experience, and suggesting commonly used queries are great ways to enhance the customer experience. While L.L. Bean offers some query suggestions while typing, they're not robust and don't always load quickly enough to be seen when a user is typing. Query example: Jacket

L.L.Bean

Q jacket

Areas Of Improvement

Redirects

A search for “Christmas” redirects to “giftshop” where non relevant results are returned. You do offer cute Christmas items today (e.x. search Christmas mugs)

Having a good search tool can mean you won't need redirects to fix bad search results and avoid experience like this

Recommendations

McKinsey found that 35% of Amazon's revenue comes from product recommendations. L.L. Bean does not currently utilize recommendations on PDP's or PLP's. While there are “Recently Viewed Items”, the carousel is blank with no images or descriptions. There is an opportunity to utilize similar products, and trending products in more areas to increase AOV and conversion rates.

Gymshark saw a +2M lift using Algolia Recommend

Recently Viewed Items

Relevance

There are several situations where results are not relevant to the query. Improvements here will lead to a huge uptick in conversion rates and AOV.

Search: White bag
you sell a lot of white totes and other bag items, however only a clear travel pouch was returned

★★★★★ 55

Content Search

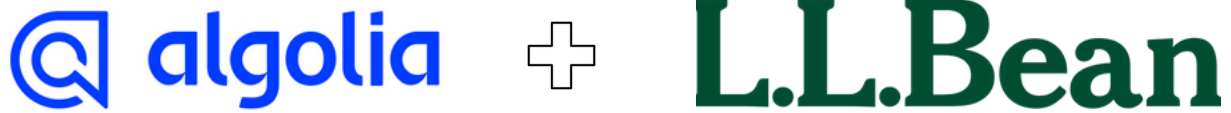

L.L. Bean has great content including events, camps, trips, videos, and blogs that showcase your products. Making them searchable will enhance the overall digital experience, and increase average time spent on the site.
